ALL ABOUT LEARN AND GROW

Power BI

From Raw Data to Business Insights

A hands-on Power BI training module that takes you from connecting and cleaning data in Power Query, through star-schema modelling and core DAX, to designing decision-ready reports and publishing and securing them in the Power BI Service.

20 SESSIONS

Beginner to intermediate

8 PARTS

Data to dashboard to capstone

30-40 HOURS

Online

FOR ANALYSTS · MIS, FINANCE, HR & OPERATIONS PROFESSIONALS · STUDENTS · MANAGERS WHO CONSUME DASHBOARDS

Why this programme

Data is only useful when people can act on it. This module follows the full Power BI workflow — from raw data to report to share — so learners finish able to build a complete, trustworthy reporting solution rather than a collection of isolated skills.

Learning outcomes

By the end, learners can clean data in Power Query, build a sound star-schema model, write core DAX measures, design decision-ready reports, and publish and secure them in the Power BI Service.

Skills you will build

Power Query	Data modelling	DAX	Report design	Service & governance
Connect to Excel, CSV, SQL, web and SharePoint; clean and combine data.	Star schema, relationships, date tables and hierarchies.	Measures, CALCULATE, time intelligence, variables and ranking.	Choosing visuals, layout, storytelling and interactivity.	Publishing, refresh, gateways and row-level security.

Who should attend

Analysts	MIS, finance, HR & operations	Students	Dashboard consumers
Building reports and analysis for the business.	Professionals who report on their own function.	Building a job-ready data and reporting skill set.	Managers who use dashboards and want to understand them.

Programme at a glance

Level	Beginner to intermediate.
Duration	30–40 hours across 20 sessions, delivered online.
Prerequisites	Basic Excel (formulas, pivot tables). No coding needed.
Tools	Power BI Desktop (free, Windows only) and a Power BI Service account. A Pro or trial licence is needed for the sharing sessions.
Practice data	Microsoft's Contoso or Adventure Works sample sets, plus one real business file from each learner.

The curriculum — 8 parts, 20 sessions

Each part builds on the last, moving from data preparation and modelling into DAX, report design, the Power BI Service, and a capstone that brings it all together.

PART 1 Foundations

- **Session 1 – BI concepts and the Power BI ecosystem:** Desktop vs Service vs Mobile, and the workflow from data to report to share.
- **Session 2 – Interface tour and first report:** connect to an Excel or CSV file and build three basic visuals.
HANDS-ON ACTIVITY: Explore a sample report and list which business questions it answers.

PART 2 Getting and Cleaning Data (Power Query)

- **Session 3 – Connecting to data:** Excel, CSV, folders, SQL, web and SharePoint.
- **Session 4 – Transforming data:** data types, split, replace, fill, pivot/unpivot, and removing errors.
- **Session 5 – Combining data:** append vs merge, parameters, and an introduction to M code.
HANDS-ON ACTIVITY: Clean a deliberately messy sales file.

PART 3 Data Modelling

- **Session 6 – Star schema:** fact and dimension tables, and why flat files cause problems.
- **Session 7 – Relationships:** cardinality, filter direction, and inactive relationships.
- **Session 8 – Date tables and hierarchies:** marking a date table and building drill paths.
HANDS-ON ACTIVITY: Turn a flat file into a working star schema.

PART 4 DAX

- **Session 9 – DAX basics:** calculated columns vs measures, and SUM, COUNT, DIVIDE and IF.
- **Session 10 – Filter context and CALCULATE:** the single most important DAX concept.
- **Session 11 – Time intelligence:** YTD, MTD, same period last year, and growth %.
- **Session 12 – Variables, iterators and ranking:** VAR, SUMX, RANKX and TOPN.
HANDS-ON ACTIVITY: Build a KPI set covering revenue, margin %, YoY growth and top 10 products.

PART 5 Visualisation and Report Design

- **Session 13 – Choosing the right visual:** charts, matrices, maps, and when not to use pie charts.
- **Session 14 – Design and layout:** themes, colour, alignment, and a one-page storytelling layout.
- **Session 15 – Interactivity:** slicers, cross-filtering, drill-through, bookmarks, tooltips and field parameters.
HANDS-ON ACTIVITY: Redesign a cluttered report into a clean executive dashboard.

PART 6 Power BI Service and Governance

- **Session 16 – Publishing and sharing:** workspaces, apps and permissions.
- **Session 17 – Refresh and security:** scheduled refresh, gateways, and row-level security (RLS).
- **Session 18 – Dashboards and consumption:** pinned tiles, alerts, subscriptions, Q&A and the mobile view.

PART 7 Performance and Advanced Topics

- **Session 19 – Optimisation:** Import vs DirectQuery, Performance Analyzer, reducing model size, incremental refresh, and an overview of Copilot features.

PART 8 Capstone

- **Session 20 – Capstone presentation:** each learner or team builds an end-to-end solution (data, model, DAX, report, published and secured) and presents it in 10 minutes with feedback.

Hands-on activities

Learners practise on Microsoft's Contoso or Adventure Works sample data, plus one real business file of their own. Every part ends with a practical build.

Part	Activity
Part 1	Explore a sample report and list which business questions it answers.
Part 2	Clean a deliberately messy sales file.
Part 3	Turn a flat file into a working star schema.
Part 4	Build a KPI set covering revenue, margin %, YoY growth and top 10 products.
Part 5	Redesign a cluttered report into a clean executive dashboard.

The capstone

One end-to-end solution, presented in 10 minutes.

Each learner or team builds a complete solution — data, model, DAX, report, published and secured — and presents it with feedback. It is scored on data quality, model design, DAX accuracy, visual clarity and storytelling.

Assessment & certification

Component	What it involves
Part quizzes	A short quiz after each part (5 to 10 questions).
Hands-on assignments	Practical assignments for Parts 2 to 5.
Capstone	Scored on data quality, model design, DAX accuracy, visual clarity and storytelling.
Completion certificate	Awarded on completion, plus a bridge to the Microsoft PL-300 (Power BI Data Analyst) exam.
